

Syk Houdeib @Syknapse

Senior Frontend Developer | React, TypeScript, Next.js | Product-focused
AI-assisted development flows

 **Location:** Madrid, Spain |  **Email:** syk.houdeib@gmail.com
 **GitHub:** [/Syknapse](https://github.com/Syknapse) |  **Portfolio:** sykhoudeib.com
 **LinkedIn:** [/syk-houdeib](https://www.linkedin.com/in/syk-houdeib) |  **Phone:** +34 629 017 619

Frontend developer with 8+ years of experience building and iterating on real products. Most of my career has been spent working in product teams shipping MVPs, scaling codebases, and improving live applications used by real users. I care about clean architecture, meaningful test coverage, and documentation that makes teams faster and codebases easier to maintain. Collaborative, product-minded, and always focused on the user, I work closely with experienced engineers and cross-functional partners, and bring a strong sense of ownership to everything I build. Experienced with modern AI-assisted development workflows, including hands-on work building AI chat interfaces.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, React.js, Next.js, HTML, CSS

Testing: Vitest, Jest, React Testing Library, Playwright, Cypress

Tools: Git, GitHub, Docker, GitHub Actions, Redux, Tailwind, Vite, Server Sent Events, SSR, Zustand, StoryBook, CSS-in-JS, pnpm, Yarn, ESLint, Prettier, Auth0, Google Maps API

AI: Claude Code, Codex, MCP, AI tools and techniques (skills, planning, agentic flows)

Other Skills: Internationalisation (i18n), Localization, Performance Optimization, Scalable Architecture

PROFESSIONAL EXPERIENCE

Xebia – Madrid (Full Remote) | 2025–2026

Senior Frontend Engineer

Led the frontend architecture of a greenfield multi-tenant agentic AI platform built on AWS Bedrock. Designed the tech stack, component architecture, and development standards from scratch. The platform enables organisations to configure custom AI agents, connect proprietary data sources, and apply brand theming for their specific use case. Primary application built on the platform: an internal tool connecting company handbook, learning tracks, and HR data to help managers generate personalised development paths for engineers and navigate company policy.

- Created reusable components in React + Next app architecture. Implemented unit and e2e tests throughout the project to ensure robustness. Implemented CI/CD pipelines with GitHub Actions for e2e testing in Docker containers and deployments in Vercel.
- Worked on iterations to improve the UX and implement new features.

- Ensured new devs can be onboarded easily by creating a well-documented project with strong emphasis on clean code and consistency.
- Used: React, Typescript, Next (App architecture), pnpm, Zustand, Vitest, Playwright, TanStack React Query & Form, Zod, clsx, ShadCN, TailWind, Mermaid, GitHub actions, Vercel.

Key Outcomes:

- Successfully delivered the MVP demonstrating the long term viability of the project.

Glovo – Madrid (Full Remote) | 2021–2024

Software Engineer II

Built a grocery delivery operations management SaaS product from scratch within a cross-functional team, taking it from initial architecture to soft launch. Balanced speed of execution with quality while prioritising scalability, and maintainability from day one through TypeScript, modular React design, and comprehensive testing.

Stepped into a de facto tech lead role in the final year, becoming the senior point of contact for a team of three frontend developers. Took ownership of code reviews, architectural decisions, cross-team coordination (backend, devops, design, product), and mentoring.

- Played a key role in decision-making that ensured timely delivery of the MVP, balancing technical rigour with the pace required to meet stakeholder expectations.
- Improved scalability and minimised bugs by enforcing clean code practices and documentation.
- Contributed to ongoing feature improvements, iterating to enhance performance and user experience in response to product requirements.

Lola Market – Madrid | 2018–2021

Frontend Developer

- Expanded reach significantly by rebuilding the site as fully responsive and mobile-friendly, driving greater user engagement.
- Was central in migrating the project codebase from Backbone to React, thus modernising the app and ensuring its long-term viability.
- Supported international expansion through full internationalisation and localization of the web app, resulting in the successful launch in 3 new countries within 6 months.
- Played key role in the implementation of Next.js server-side rendering (SSR), performance optimizations, and SEO boosting performance by 80% and improving conversion funnels.
- Contributed to a white-label project that enabled partnerships with major brands like Cabify and AliExpress, significantly increasing revenue and market reach.

Key Outcomes:

- Facilitated international expansion, contributing directly to increased profitability and investor value.

- Enhanced app performance, user experience, and SEO, driving significant increases in organic traffic.
- The application played a pivotal role during Covid lockdowns becoming an essential service and successfully handling exponentially larger traffic and volume of orders.
- The success of the application eventually led to the company being acquired by a leader in the sector, with a special emphasis in the deal on the 12-person engineering team I was part of.

EDUCATION

BA (Hons) Creative Music Technology – University of Hull, UK | 2003–2006

Graduated with First Class Honours. Scored 90% on the final long study.

GitHub Foundation and GitHub Actions Certificates

Nanodegree in Front End Web Development – Udacity (Google Scholarship) | 2017

Completed an intensive program with a focus on modern frontend technologies and best practices.

ABOUT ME

I'm an avid lifelong learner who embraces change and growth. I have a genuine instinct to share what I learn, whether that's mentoring a junior, writing a blog post, or creating a helpful tutorial.

I'm an active contributor in the development community with over 3400 GitHub stars, most notably for my open source tutorial project [Contribute-To-This-Project](#). I contribute tech articles and have been published in FreeCodeCamp, Hackernoon, Honeypot's .Cult, and Better Programming, including my widely-read [article about transitioning to tech](#).

I am fluent in **English**, **Spanish**, and **Arabic**.

Beyond software, I love cooking and exploring food. Deeply enthusiastic about everything to do with music. I'm always curious, I like to learn about linguistics, history, science, and everything ever!
